

Best Practice Handbook – Nature Conservation in Beech Forests Used for Timber

**Nature conservation objectives and
management recommendations for mature beech forests
in north-eastern Germany**

**Susanne Winter, Heike Begehold, Mathias Herrmann,
Matthias Lüderitz, Georg Möller, Michael Rzanny,
Martin Flade**

Lisa Apfelbacher (illustrations), Freiburg

Technical consultants:

Inga Frehse	Technische Universität Dresden
Beate Blahy	Schorfheide-Chorin Biosphere Reserve
Dr Claus Bässler	Bavarian Forest National Park Administration
Dr Gernod Bilke	State Forest Administration of Brandenburg
Dr Oliver Dürhammer	Moose Deutschland – Head Office Germany, Pentling
Michael Duhr	Ministry of Agriculture, Environment and Climate Protection of the Federal State of Brandenburg, Department of Forestry
Prof Dr Werner Härdtle	Leuphana University of Lüneburg, Institute of Ecology
Daniel Kraus	Integrate+–Projekt, European Forest Institute, Freiburg
Eberhard Luft	State Forest Administration of Brandenburg, Chorin Forest District
Dietrich Mehl	State Forest Administration of Brandenburg, Reiersdorf Forest District
Dr Peter Meyer	Northwest German Forest Research Institute
Karin Müller	Ministry of Agriculture, Environment and Climate Protection of the Federal State of Brandenburg, Department of Forestry
Ralf Neuss	Ministry of Agriculture and the Environment of the Federal State of Mecklenburg-Western Pome- rania, Department of Sustainable Development, Forestry and Nature Conservation
Olaf Ruffer	Forest Administration of the state of Brandenburg, Eberswalde Forestry Competence Centre
Prof Peter A. Schmidt	Technische Universität Dresden (former Chair of Biodiversity and Nature Conservation)
Steffen Schmidt	State Forest Administration of Brandenburg, Eberswalde Forestry Competence Centre
Dr Heiko Schumacher	Heinz Sielmann Stiftung
Dr Falk Stähr	State Forest Administration of Brandenburg, Eberswalde Forestry Competence Centre
Dr Peter Wernicke †	Feldberg Lake District Nature Park

**Consultation with the German Federal Agency
for Nature Conservation: Hagen Kluttig**

TABLE OF CONTENTS

Forewords	
Dr Beate Jessel, President of the German Federal Agency for Nature Conservation	5
Axel Vogel, Minister of Agriculture, Environment and Climate Protection of the Federal State of Brandenburg	8
1. Preserving biodiversity - A shared responsibility	10
1.1 Biological diversity, beech forests and forest management	11
1.2 A brief overview of the legal principles and management guidelines	15
1.3 Which factors determine biodiversity in forests?	24
2. Management principles	28
3. Silvicultural recommendations for the management of lowland beech forest used for wood	34
3.1 Recommendations for promoting natural forest elements in managed forests	36
Recommendation 1 – Forest development phases	36
Recommendation 2 – Stand structure	39
Recommendation 3 – Mature trees	41
Recommendation 4 – Lower use limits of target trees	43
Recommendation 5 – Microhabitat trees	44
Recommendation 6 – Terricole microhabitats and larger terricole structures	45
Recommendation 7 – Deadwood	46
Recommendation 8 – Stock volume	48
Recommendation 9 – Mixed and secondary tree species and natural rejuvenation	50
Recommendation 10 – Inner and outer edges of forests	52
3.2 Recommendations for minimising the negative impacts of forest management	54
Recommendation 11 – Soil protection in timber harvesting and skidding trail system	54
Recommendation 12 – Soil cultivation	55
Recommendation 13 – Use of biocides and fertilisers, liming	56
Recommendation 14 – No forestry operations during the breeding season	56
Recommendation 15 – Energy and firewood from forests	57
Recommendation 16 – Ungulate management and browsing reduction	58
Recommendation 17 – Non-native tree species	59
Recommendation 18 – Water regime, mires and wetlands in forests	60
Recommendation 19 – Forest trails	62
3.3 Basic recommendations for natural forest management	64
Recommendation 20 – Beech forests in protected areas	64
Recommendation 21 – Assign monetary value to nature conservation services	64
Recommendation 22 – Information about road safety requirements	65

4. Important natural forest structures for the biodiversity of beech forests – Fact sheets with structure-bound species groups and key species	66
4.1 Forest development phases	68
4.2 Microhabitats on a living tree	74
4.2.1 Trees with fungus	78
Trees with hoof fungus 78	
Trees with red banded polypore 80	
Trees inhabited by other lignicolous fungi 82	
4.2.2 Trees with crown fractures and broken trunks	84
Crown fractures 84	
Broken trunks on living trees and trees with substitute crowns 86	
Broken forks 88	
4.2.3 Exposed sapwood	90
Lightning scars 90	
Cracks and crevices 92	
Patches of bark loss 94	
4.2.4 Trees with cavities	96
Trees with cavities, general 96	
Woodpecker and branch cavities 100	
Hollowed out trunks 102	
Mould cavities 104	
Cavity strings 106	
4.2.5 Bark pockets	108
Bark pockets without mould 108	
Mould pockets 110	
4.2.6 Special individual trees	112
Trees with climbing plants 112	
Water-filled holes (dendrotelms) 114	
Cankers and burls 116	
Trees with nests 118	
4.3 Other biodiversity-promoting tree characteristics	120
Mixed and secondary tree species 122	
Slanted trees 124	
Trees with thick branches 126	
Bizarre trees 128	
4.4 Terricole structures	130
Moss cushions 132	
Large stones and boulders 134	
Root plates 136	
Erosion structures 138	
Springs 140	
4.5 Deadwood	142
4.5.1 Deadwood qualities	142
Tree species 143	
Size 143	
Degree of decomposition 143	
Bark 144	
Sunlight 145	
Position in relation to the ground 145	
4.5.2 Living trees with deadwood structures	146
4.5.3 Deadwood structures of dead trees	148
Standing dead trees and tall stumps 149	
Split trunks 150	
Short stumps 152	
Lying crown deadwood and thick branches 152	
Lying trunk wood 154	
5. Recommendations for monitoring and measuring success	158
6. Bibliography	168
Photo credits	175
Acknowledgements	176
Species register	177
Publication details	186
